GAME CHANGER

MAXIMUM STRENGTH

Revolutionary New
Artificial Grass Fiber

Maximum Strength

The most revolutionary development in fiber technology used in the production of landscape grass fibers has recently been announced by ProGreen Canada. This game changing fiber improvement effectively **doubles** the strength and resiliency of its artificial landscape grass fibers being installed in hundreds if not thousands of backyards across Canada. This state of the art technology improvement gives ProGreen Canada an immense advantage over all other landscape grass products being offered and will likely be the case for the foreseeable future. These improvements significantly improve the artificial grass durability, resilience and longevity to the delight of homeowners alike.

Simply put they are two types of fibers, one designed and constructed for large “sport fields” i.e. football and soccer made with **polypropylene** the toughest fiber withstanding 300lb + players running and tackling, all while wearing steel cleats. The other fiber made with **polyethylene** was designed as a “landscape grass” having a much softer touch & feel mostly for gentler settings found in backyards. Until now manufacturer’s have not been able to create the softer feel using polypropylene but through extensive research and development ProGreen has successfully launched its dual fiber which incorporates both fibers giving it a maximum strength while maintaining softness of the traditional landscape grass. It is a mix of both, ProGreen’s fibrillated slit fiber “SPORT TURF” and the new diamond blade fiber found in its “REAL SERIES” of landscape grass offerings. This fusion of the two fibers into the ProGreen Canada landscape grass offers a natural green 4-color blend with golden thatch interspersed throughout but better still the superior resiliency makes the fibers much more resistant to lying back down even in heavy traffic.

Toronto Canada

This revolutionary, game changing artificial grass product is now available for ordering through ProGreen Canada or Design Turf of Toronto and it will be fully revealed to the public at the "Product Launch" event at the new "STACKT MARKET" downtown Toronto June 2018.

GUARANTEES

1. WE DO NOT USE OVERSEA components in the manufacturing of our grass.
2. We do not use INFERIOR RESINS
3. We do not add UNKNOWN or QUESTIONABLE FILLERS to our resins
4. We do not use 3 ply backings.
5. We do not use lead or other chemical contaminants
6. We do not have perforations in our backings

30 YEARS IN BUSINESS IS A SERIOUS BUSINESS

Following an international tactile test amongst 3 leading synthetic grass products, when asked, "which one feels the softest?" our new Diamond blade was chosen 100% of the time

**PROFLOW BACKING
400% FASTER DRAINING**

Creating better grass that really last

- ✓ 100% Made In-house in the US. The only company with vertically integrated fiber manufacturing, tufting, coating and installation.
- ✓ 100% Proprietary premium metallacene polymer from Exxon Mobil
- ✓ No "fillers" used in fiber resins
- ✓ 4 Ply Backing on all products
- ✓ NO Lead & NO Heavy Chemicals
- ✓ Patent Pending PROFLOW Backing 400% quicker draining than most others.
- ✓ Cool Fiber Technology 20-25 degrees F. cooler (ask for testing)
- ✓ UNMATCHED DURABILITY 40% higher strength than a comparable "Tencate" fibre Routinely passes 100,000 plus cycles on a Lisport accelerated test.
- ✓ 15 Year Manufacturer's Warranty
- ✓ 3 rd. Party INSURED
